Vitess Overview

Vitess

@vitessio

What is Vitess?

Cloud Native Database

Massively Scalable

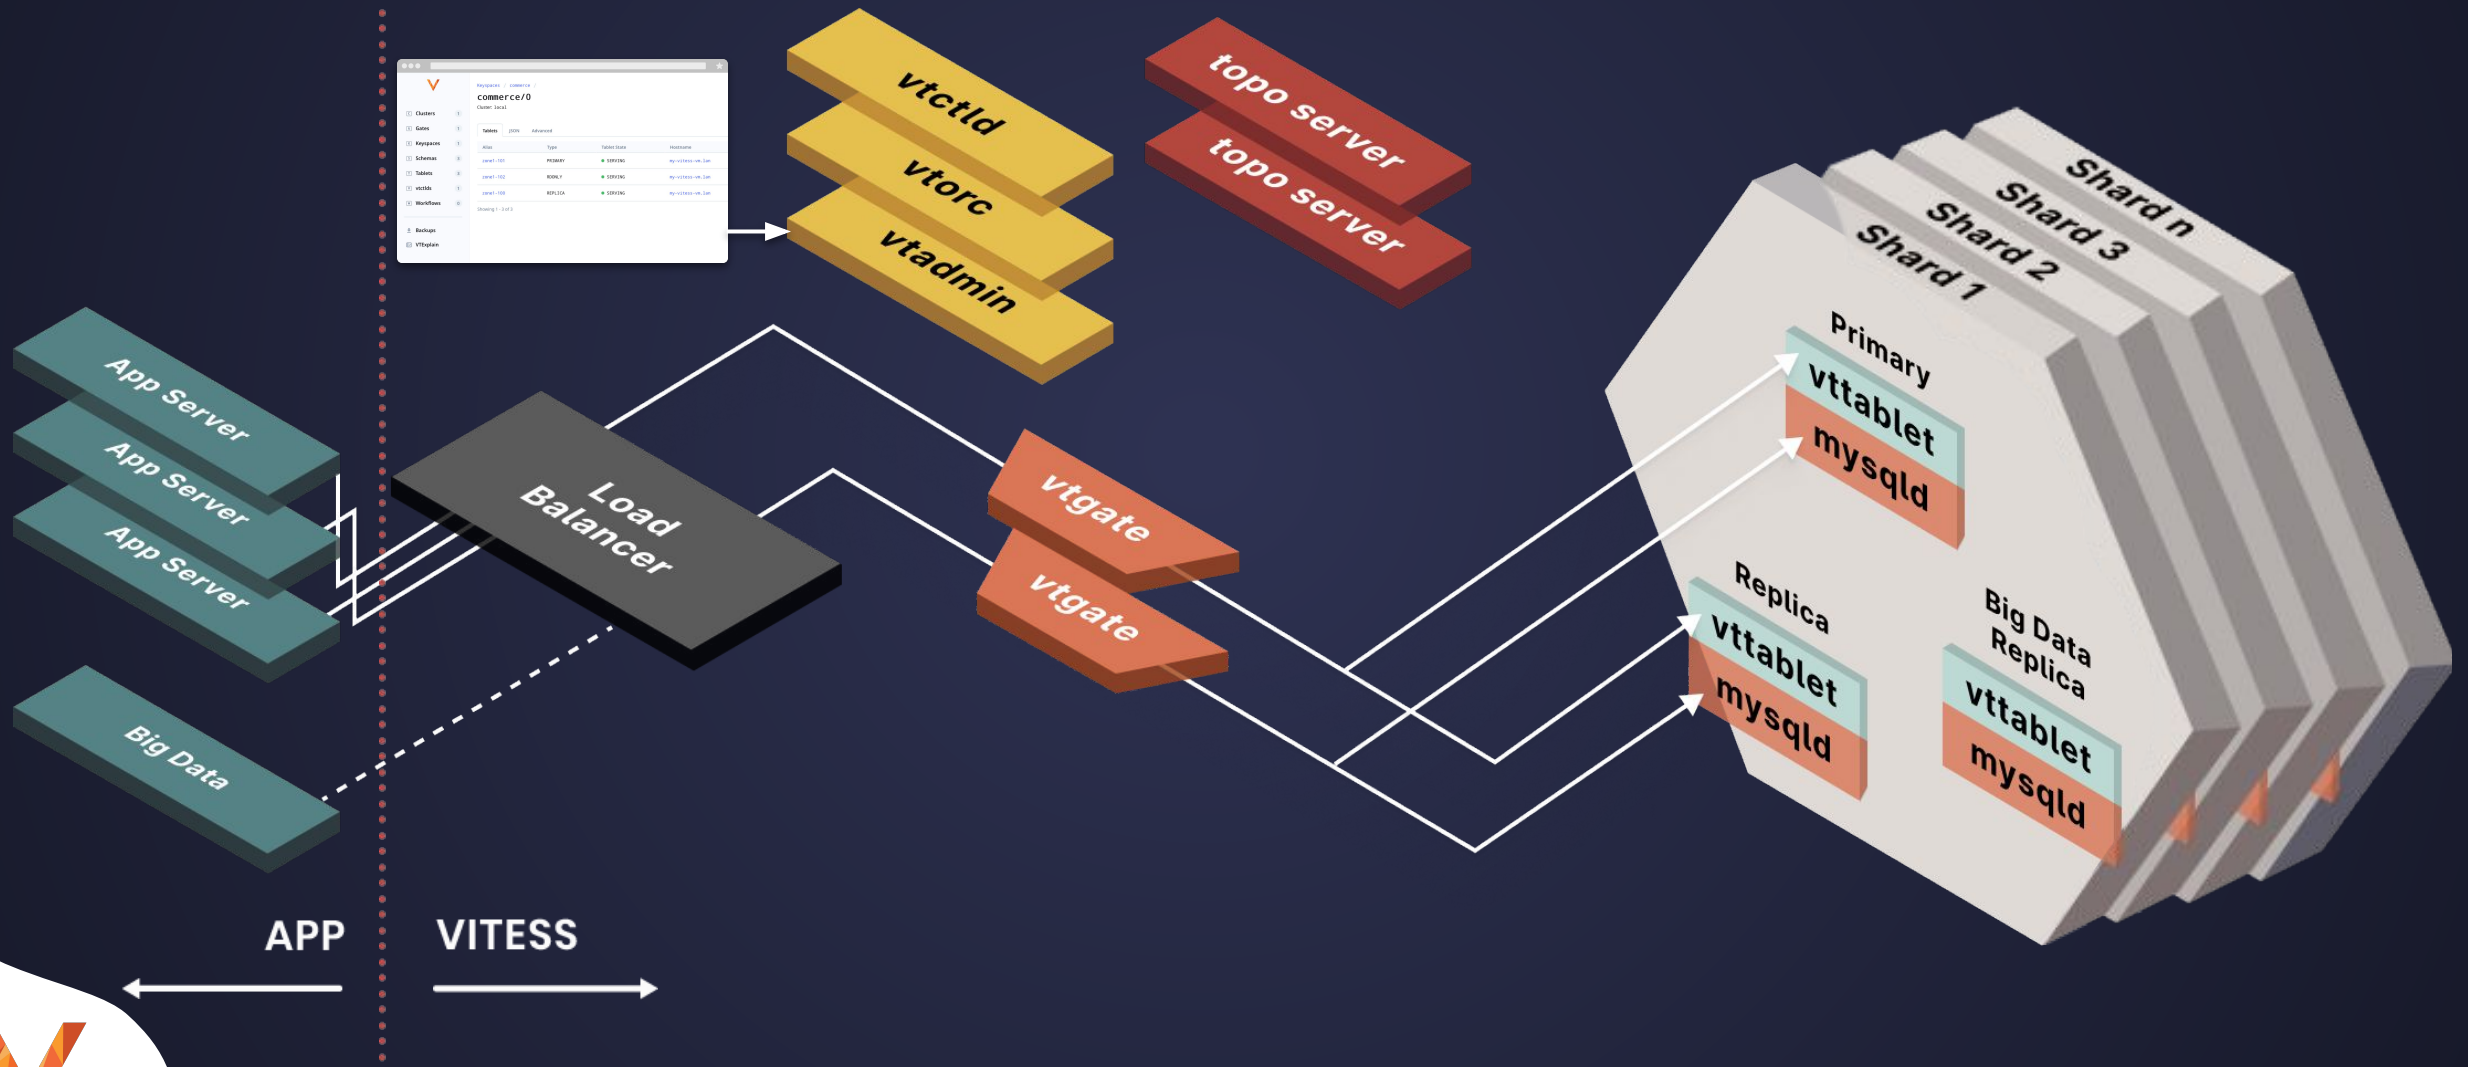

Highly Available

MySQL 5.7/8.0 Compatible

Vitess

BUILDING FOR THE ROAD AHEAD

DETROIT 2022

VTOrc Overview

Vitess

@vitessio

Problem Statement

- Resiliency to MySQL failures
- High availability
- Data Durability
- Minimize downtime / recovery time

Before there was VTOrc ...

- openark/orchestrator
- Integrated with Vitess
- semi_sync mode for VTTablet
- Works well enough most of the time
- But not all the time

VTOrc

- VTTablet manages MySQL
- VTOrc is the agent that detects failures
- Durability through Replication
  - Policies allow trade-offs
- High availability through failover
  - Planned / unplanned leader election
- GA in v15

Vitess

@vitessio

Design Principles

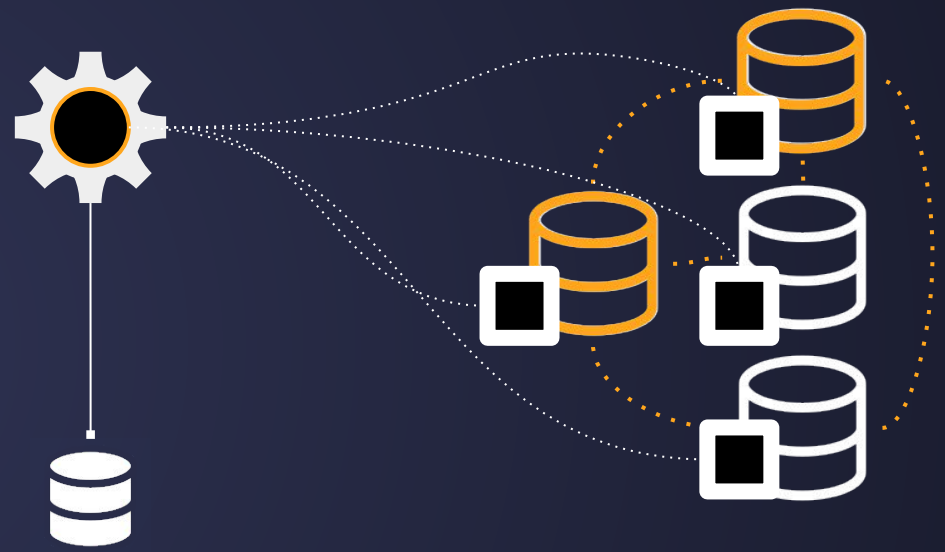

- Single leader system
- Fulfill requests while respecting durability policy
- Leader election process
  - Planned versus unplanned
- Forward Progress
- Race conditions

Leader Election

- Revocation
- Election
- Propagation

Planned Leader Election

- Revocation
  - Current leader is asked to step down
- Leader selection
  - A new leader is chosen
- Propagation
  - Completed requests

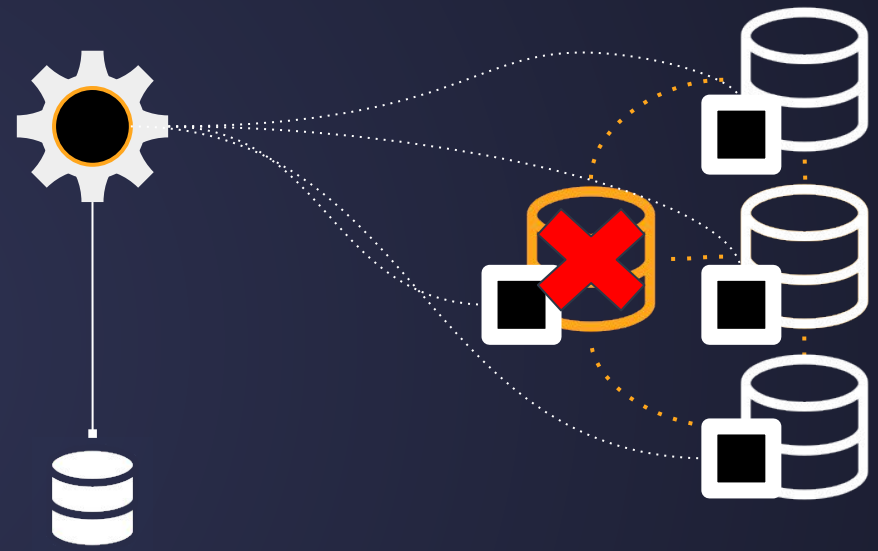

Vitess

@vitessio

Unplanned Leader Election

- Revocation
  - Reach “m” followers
- Leader selection
  - A new leader is chosen
  - Based on durability policy
- Propagation
  - Completed requests

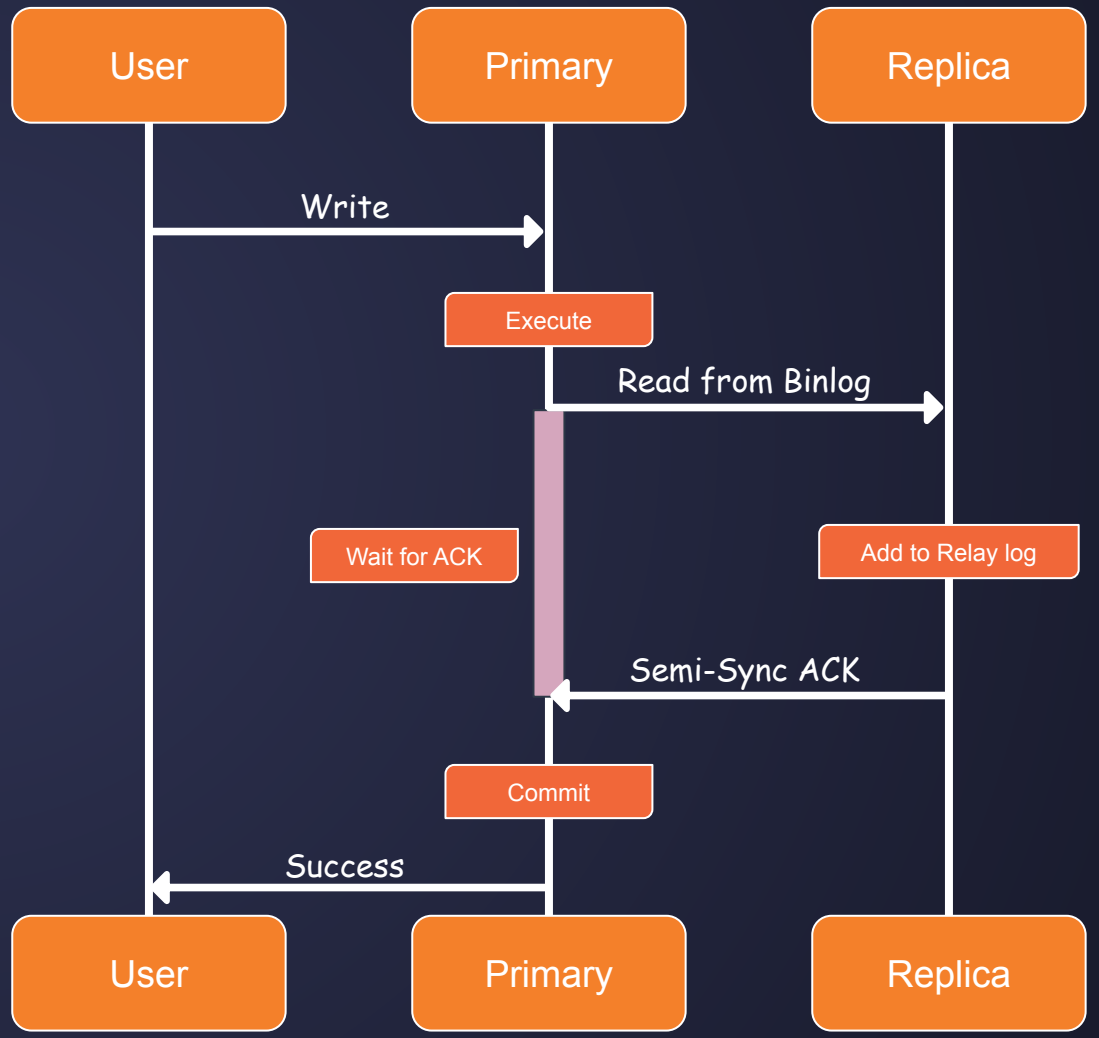

Vitess

@vitessio

Durability Policies & Semi-Sync

- Semi-Sync in MySQL
- Durability Policy
  - Who can be the primary?
  - How many semi-sync ACKs required for each primary?
  - Who can send these ACKs?
- Increased Flexibility

Vitess

@vitessio

Revocation and Quorum

- What is “m”?
- How do we know we have reached sufficient tablets to guarantee safety?

- Intersecting Quorum
- Quorum for accepting transactions
- Quorum for revocation

Revocation and Quorum

Vitess

@vitessio

Revocation and Quorum

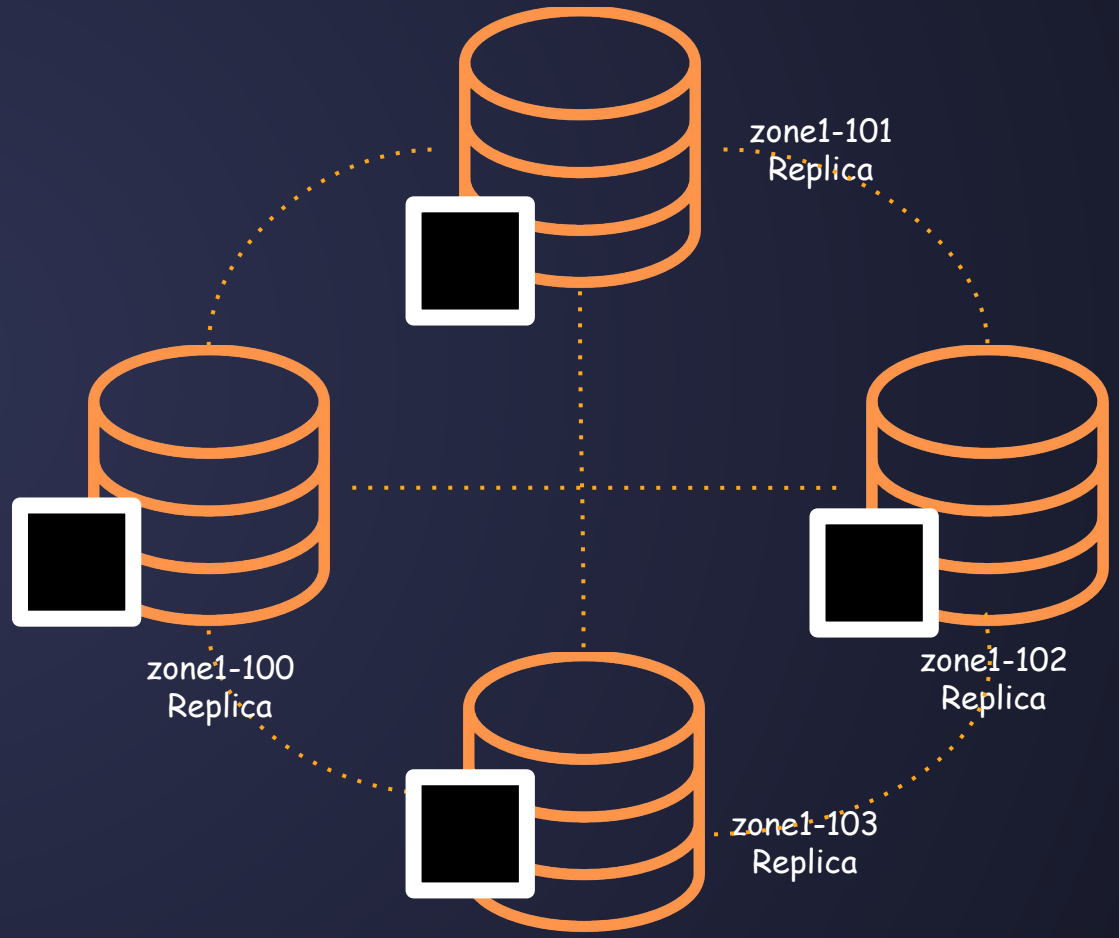

Vitess

@vitessio

Demo

Semi-Sync Durability

- `semi_sync_ks`
- Durability Policy - semi-sync
  - Any replica can be the primary
  - 1 semi-sync ACK required
  - Any replica can send the ACK

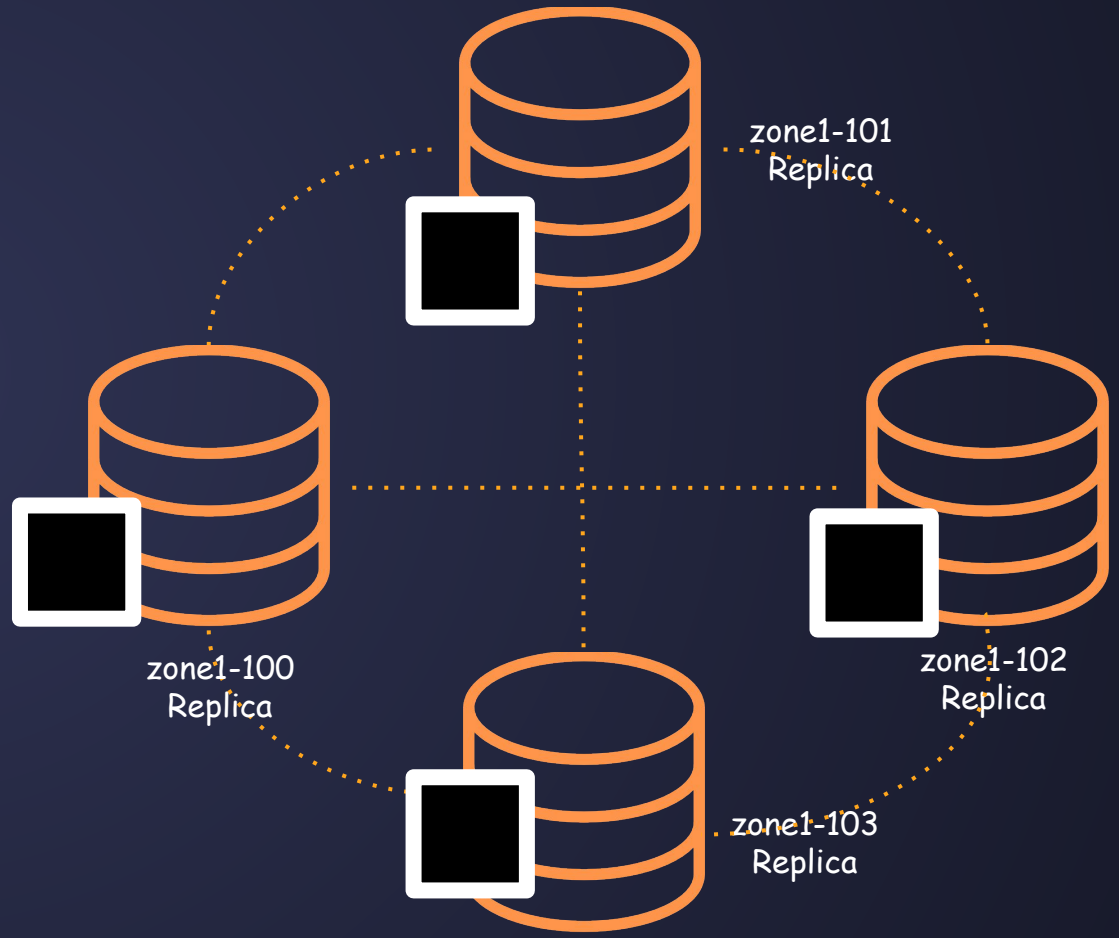

Vitess

@vitessio

Revocation

- **Quorums for Accepting Transactions**
  - [(**100**, 101), (**100**, 102), (**100**, 103)]
  - [(**101**, 100), (**101**, 102), (**101**, 103)]
  - [(**102**, 100), (**102**, 101), (**102**, 103)]
  - [(**103**, 100), (**103**, 101), (**103**, 102)]
- **Quorums for Revocations -**
  - [100, 103] ❌
  - [100, 102, 103] ✅
  - [100, 101, 102, 103] ✅
  - [101] ❌

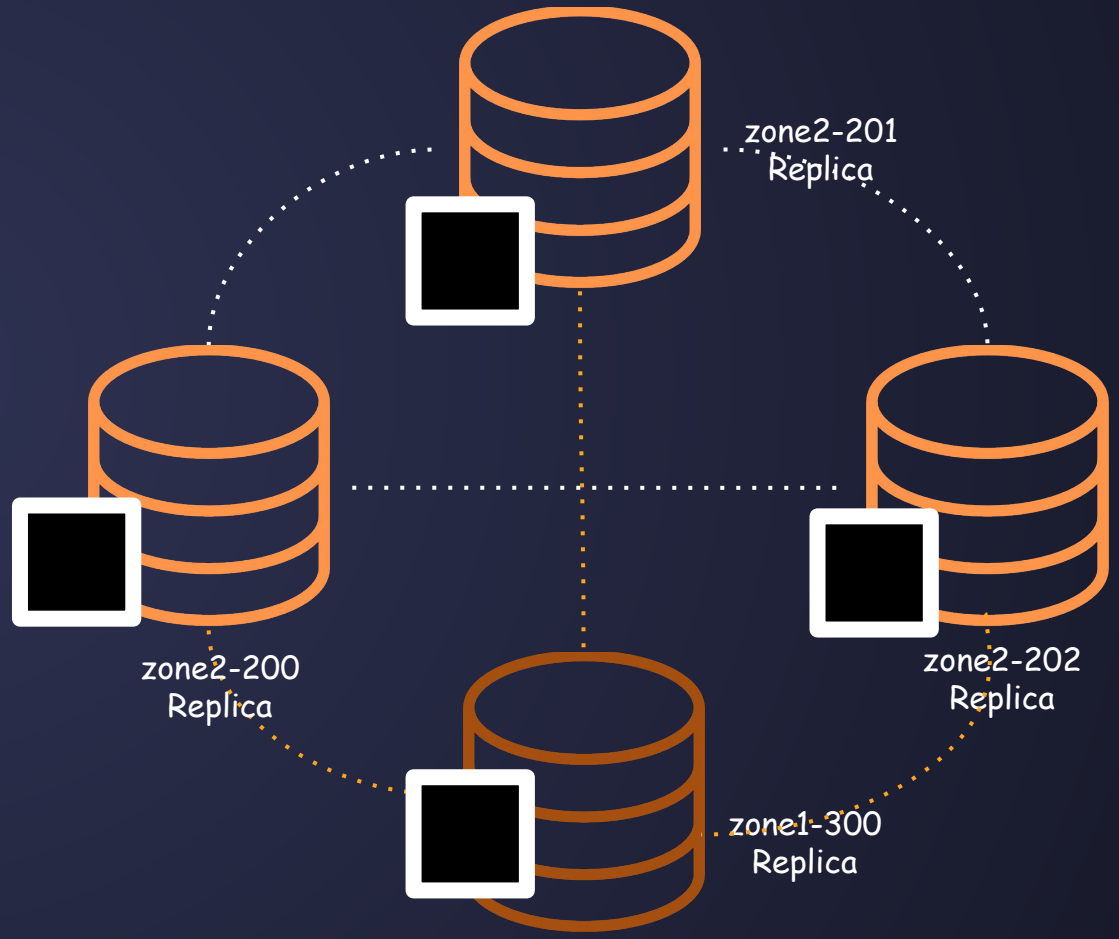

Vitess

@vitessio

Cross-Cell Durability

- `cross_cell_ks`
- Cell = Failure Domain

- Durability Policy - cross-cell
  - Any replica can be the primary
  - 1 semi-sync ACK required
  - A replica from a different cell can send an ACK

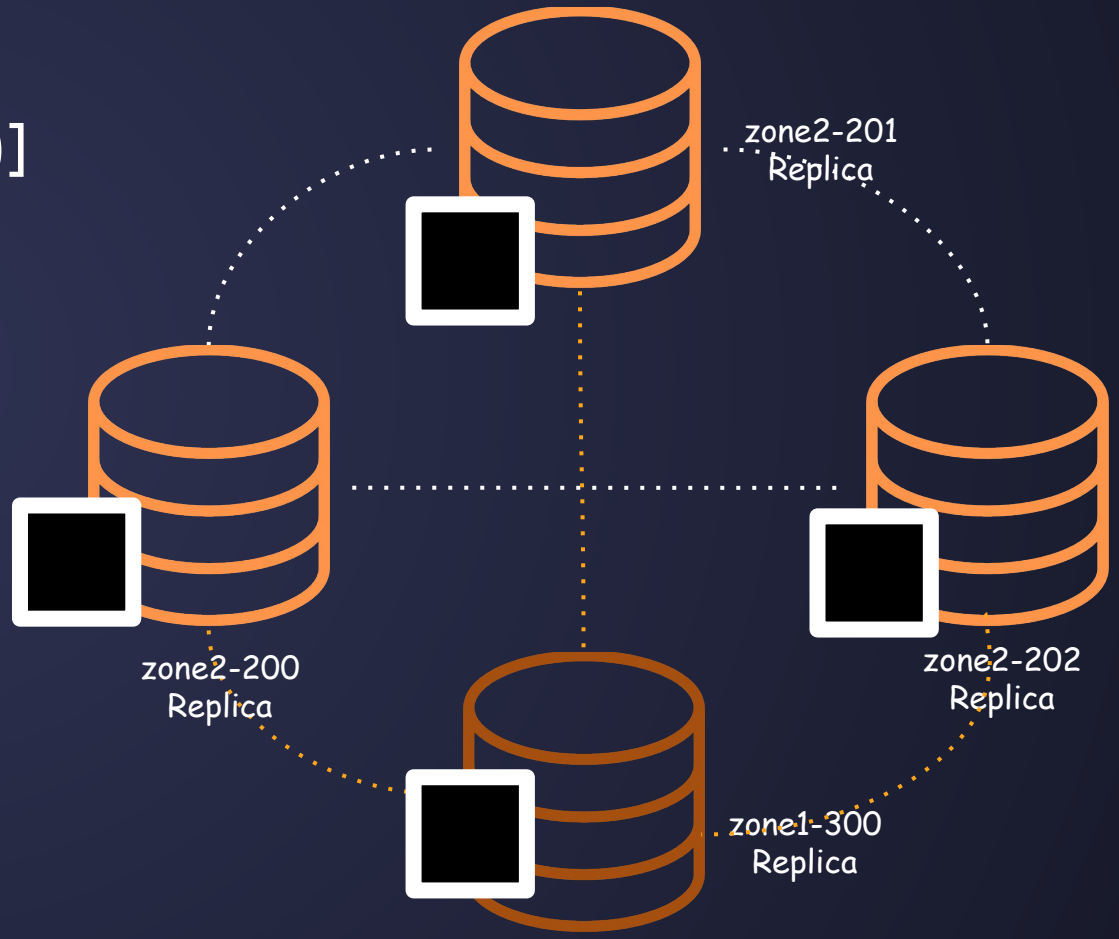

Vitess

@vitessio

Revocation

- **Quorums for Accepting Transactions**
  - [(**300**, 200), (**300**, 201), (**300**, 202)]
  - [(**200**, 300)]
  - [(**201**, 300)]
  - [(**202**, 300)]

- **Quorums for Revocations -**
  - [200, 201] ❌
  - [300, 202, 201] ✅
  - [300, 201] ✅
  - [300, 200, 201, 202] ✅

Vitess

@vitessio

Custom Durability Policies

- **Quorums for Accepting Transactions**
  - [(**A**, B, C), (**A**, B, D), (**A**, C, D)]
  - [(**B**, D), (**B**, A)]
  - [(**C**, B)]

- **Quorums for Revocations -**
  - [A, D] ❌
  - [A, B, D] ✅
  - [B, C] ✅
  - [C, D] ❌

Vitess

@vitessio

More Failure Scenarios

- Maintains the cluster's desired state
- Primary is Read-Only
- Replica's replication is stopped
- Replica is writable
- Semi-sync settings are incorrect
- Shard has no primary
- Primary is replicating from a different tablet

Q & A
